## SANY Crawler Crane

### 450 Tons Lifting Capacity

Quality Changes the World

**Max. lifting moment: 6006t·m**

**Longest boom: 84m**

**Longest boom +jib: 84m + 84m**

The parameters and diagrams in the brochure is only for reference, which is subject to further update in real machine.

## Product Specification

### Engine

- Model: Cummins Diesel engine (European Tier III Emission Standard);
- Type: water-cooled, vertical in-line 6 cylinders, direct injection, turbo-charger, intercooler, complied with European Off-highway Tier III Emission Standard and Chinese Off-highway Tier III Emission Standard;
- Displacement: 10.8L;
- Rated power: 298kW/1800rpm;
- Max. Torque: 1898N·m/1400rpm;
- Starter: 24V-8.0kW;
- Radiator: fin type aluminum plate core;
- Air cleaner: Dry type system with main filter element, safety element and resistance indicator;
- Throttle: Grip type hand throttle, electrically-controlled;
- Fuel filter: Replaceable paper element;
- Batteries: Four 12V×180Ah capacity batteries, connected in series and then in parallel;
- Fuel tank capacity: 800L.

### Electrical Control System

- Self-developed SYIC-I integrated control system is adopted with higher integration, precise operation and reliable quality;
- Control system consists of power system, engine system, main control system, LMI system, auxiliary system and safety monitoring system;
- Main electrical components are from internationally or industrially well-known brands, and they can perform stably in such bad environment as in severe low or high temperature, plateau, and sandstorms. The design with multi-stage safety limits and kinds of safety signal indicators, totally complies with CE Standard;
- LMI, combined monitors and closed circuit monitor are directly visible to operator. LMI detects the lifting moment and other status; combined monitors display operation conditions, limited status under control and alarms; closed circuit monitor monitors working conditions of the winch and rear parts. For armrest boxes at both sides, there are three operation levers, and the button switches the control functions, so the function elected and respective operating range of the lever will appear on the monitors;

### Hydraulic System

- Main pumps: five close piston pumps of electronic proportion are adopted to provide oil supply for main actuators of main machine;
- Assisting pump: electronic proportion open piston pump, providing oil for assisting cylinder;
- Back-stop pump: load-sensitive feedback pump, providing oil for back-stop system;
- Gear pump: two dual-gear pumps for oil-boosting system, oil radiator, A/C control circuit;
- Control: closed main pump adopts electronically controlled system, and the electronic lever controls the closed the pump and variable-placement motor;
- Rated pressure of main system: 35MPa;
- Oil boosting system: 3.5 MPa;
- Hydraulic Tank Capacity: 817L;
- Components: hydraulic system of load hoisting, traveling, swing, hoisting and luffing, servo, anti-backstop, cooling, aux. system. Main components are all imported originally;
- Features: Closed circuit is adopted for all load hoisting hydraulic, traveling hydraulic, hoisting and luffing hydraulic and swing hydraulic system, featured by saving energy, high-efficiency, fast-reaction, low heat emission, and long service life;
- Servo hydraulic system adopts electronic proportion controlled components for accurate and smart control;
- Backstop hydraulic system adopts external-controlled releasing balance valve on the hydraulic, safety and reliable;
- Cooling system is featured with high radiating power and excellent cooling result.

### Cab

- Fully-enclosed steel frame structure and large area of glass window at front, sides and top make brightened cab with broaden view. The floating, damping and de-noising, and multi-stage adjusted seat, and air conditioner enable better operating experience. There are control lever, control button and ignition lock fitted in the right and left armrest box and assisting control box. The low noise (less than 85dB), the ergonomically designed seat and buttons realize more comfortable operation. The cab can tilt up from 0°~24° for broaden view and rotates to the front of the platform for convenient transport.

### Closed circuit camera system

- The camera system is fitted with two monitors and multi cameras, each monitor displaying four pictures at most, realizing real-time monitoring the rope rotating of the winch drum, lifting status of the superlifting counterweight and surrounding;
- The system is equipped with recording function, and longest reserving time can be up to 76 hours, providing reference to the operation and accident.

## Product Specification

### Main and Aux. Load Hoist Mechanism

- A variable hydraulic motor drives the planetary gear reducer to control the lifting and lowering of main hoists I and II. A good inching performance is provided. The highest speed can be realized through main hoist I and II. Synchronization function is designed. One hoist for load less than 225t, dual main hoists work at the same time for load exceeding 225t; When single rope pull of any main hoist is larger than 6t, the synchronization function acts, winching speed of out most layer reaches 140m/min, and the largest parts of line is 36. Multiple layers of wire rope on fold-line drum can avoid messing rope. The gearbox is quiet and efficient, with longer service life and convenient fuel change.

|                              |  |            |
|------------------------------|--|------------|
| Main load hoist mechanism I  | Drum diameter                          | 666mm      |
|                              | Rope speed on the outermost work layer | 0~140m/min |
|                              | Steel rope diameter                    | 26mm       |
|                              | Steel rope length of main hoist        | 950m       |
|                              | Rated tension of single rope           | 15.3t      |
| Main load hoist mechanism II | Drum diameter                          | 666mm      |
|                              | Rope speed on the outermost work layer | 0~140m/min |
|                              | Steel rope diameter                    | 26mm       |
|                              | Steel rope length of main hoist II     | 950m       |
|                              | Rated tension of single rope           | 15.3t      |

### Boom/Jib/Superlift Hoist Mechanism

- Including: luffing mechanisms of the boom, jib and superlift;
- Drums with fold-line grooves are adopted for all luffing devices. Hydraulic motor drives the planetary gear reducer with excellent infinitely variable displacement to realize multi-functions.

|                                  |  |               |
|----------------------------------|--|---------------|
| Boom luffing mechanism           | Drum diameter                          | 641mm         |
|                                  | Rope speed on the outermost work layer | (0~70)×2m/min |
|                                  | Steel rope diameter                    | 26mm          |
|                                  | Steel rope length of boom luffing      | 560m          |
| Jib luffing mechanism            | Drum diameter                          | 676mm         |
|                                  | Rope speed on the outermost work layer | 0~110m/min    |
|                                  | Steel rope diameter                    | 26mm          |
|                                  | Steel rope length of jib luffing       | 740m          |
| Superlift mast luffing mechanism | Drum diameter                          | 676mm         |
|                                  | Rope speed on the outermost work layer | 0~110m/min    |
|                                  | Steel rope diameter                    | 26mm          |
|                                  | Steel rope length of superlift luffing | 840m          |

### Swing Mechanism

- Swing hydraulic system adopts dual motors and is driven by the planetary reducer via gear. It can realize 360° swinging range, infinitely variable swing speed of 0~0.86r/min, and steady free flipping function, without shocking at start and stop.
- Swing ring: three-row roller external-engaged bearing.

### Carbody

- The hydraulic cylinder drives power pin to be connected with track frame to facilitate the assembly and disassembly. Frame structures are welded by high-strength steel. Larger chassis design greatly improves the stability of the crane;
- Carbody counterweight: Total weight: 50t, each 25t at rear and front, including counterweight tray: 15t\*2, 10t standard counterweight block\*2.

### Crawler Assembly

- Track frame: each track frame is equipped with an independent travel driving device. A hydraulic travel motor drives the planetary gear reducer and realizes independent traveling through the transmission of driving wheel. There are 4-stage speeds: 0.33km/h, 0.55km/h, 0.77km/h, 1.00km/h. The travel system is configured with high and low speeds: sufficient traction is provided in low speed to travel with 100% load, while faster job-site transfer is possible in high travel speed. Infinite variable speed can be realized in travel driving system;
- Track shoe: it is manufactured by advanced casting techniques and materials with high strength and good wear resistance. After assembled on the machine, the tension can be adjusted by a hydraulic jack with shims used to secure the crawler position.

### Operation Equipments

- All operation equipments adopt high-strength steel tubes and plates; the sheaves at boom tops and hooks are all made of milled welded steel.

## Product Specification

### Counterweight

- Counterweight include carbody counterweight, rear counterweight, superlift counterweight, and the details are listed below:

| Name                          | Quantity | Length (m) | Width (m) | Height (m) | Unit Weight (t) |
|-------------------------------|----------|------------|-----------|------------|-----------------|
| Carbody counterweight tray    | 2        | 2.99       | 2.94      | 1.06       | 15              |
| Carbody counterweight block   | 2        | 2.85       | 2.4       | 0.48       | 10              |
| Rear counterweight tray       | 2        | 3.18       | 2.83      | 1.8        | 10              |
| Rear counterweight block      | 16       | 2.85       | 2.4       | 0.48       | 10              |
| Superlift counterweight tray  | 1        | 8.6        | 2.5       | 1.83       | 30              |
| Superlift counterweight block | 18       | 2.85       | 2.4       | 0.48       | 10              |

### Operation Equipment

- All chords are high-strength steel tubes, and the boom/jib top sheaves are made of high-strength anti-wearing Nylon material protecting wire rope. The hooks are installed with milled welded steel sheave.

### Boom

- The boom is a spatial lattice structure with equal section areas for inserts and tapered section areas for both ends. With pipes welded together, and boom tip and root strengthened with steel plates, it can better transfer the load;
- The length of the boom ranges from that (24m) of the base boom to the maximum length (84m) and it can be increased progressively by 6m;
- Composition: boom base 12m×1, transitional insert 10.5m×1, connecting section (boom top) 1.5m×1, insert section 6m×2, and insert section 12m×4;
- Optional offers: 3m boom(for wind energy configuration without superlift, 60m power boom(12m\*5);
- The extension jib can install on the boom top.

### Fixed Jib

- The fixed jib is a spatial lattice structure with equal section areas for inserts and tapered section areas for both ends. With pipes welded together, and boom tip and root strengthened with steel plates, it can better transfer the load;
- The length of fixed jib is 12m, and with jib extension.

### Luffing Jib

- The luffing jib is a spatial lattice structure with equal section areas for inserts and tapered section areas for both ends. With pipes welded together, and boom tip and root strengthened with steel plates, it can better transfer the load;
- The length of the luffing jib ranges from 24m to 84m;
- Composition: jib base 10.5m×1, jib insert 6m×3, jib insert 12m×4, and jib top 7.5m×1;
- The extension jib can install on the jib top.

### Superlift Device

- The superlift mast is a spatial lattice structure with equal section areas for inserts and tapered section areas for both ends. With pipes welded together, and boom tip and root strengthened with steel plates, it can better transfer the load;
- The superlift mast is 30m long;
- Composition: mast base 12m×1, insert section 6m×1, and mast top 12m×1.

### Hook

- 6 kinds of hooks are available, and specific parameters are as follows:

| Name of Hook  | Max. Lifting Capacity | Quantity | Pulleys | Unit Weight (t) |
|---------------|-----------------------|----------|---------|-----------------|
| 450t hook     | 450t                  | 1        | 2×9     | 10.9            |
| 240t hook     | 240t                  | 1        | 2×4     | 6.8             |
| 160t hook     | 160t                  | 1        | 2×3     | 3.8             |
| 130t hook     | 130t                  | 1        | 5       | 3.06            |
| 50t hook      | 50t                   | 1        | 2       | 2.4             |
| 16t ball hook | 16t                   | 1        | -       | 0.9             |

Note: The 450t hook, 240t hook, and 160t hook can be respectively decomposed to 225t hook, 120t hook, 80t hook. For shield configuration, 200t hook of a single sheave is available.

## Safety Devices

### Operating Weight

- The operating weight is about 380t, including the Upperworks, lowerworks, rear counterweight of basic machine, carbody counterweight, 24m basic boom and 450t hook.

### Ground Bearing Pressure

- The average ground pressure of machine with basic boom is 0.175MPa.

### Gradeability

- The gradeability of machine with basic boom is 15%.

### Load Moment Limiter

- The proprietary load moment limiter independently developed by Sany is adopted, which forms a network with other controllers through CAN bus line, so as to realize safe and reliable control. The load moment limiter can automatically detect the hoisting weight of the crane and the angle of the boom, and display the rated load capacity, actual load, working radius, and the allowable height of the hook;
- The load moment limiter system consists of a large-screen color display, a host computer, angle sensors, tension sensors, pressure sensors and other components.

### Over-hoist Protection of the Main and Auxiliary Hooks

- It is used to prevent the over-hoist of the hook. When the lifting hook is raised to a certain height, the limit switch will start working, and hook will be automatically cut off from moving up by the control system. Meanwhile, the display and the buzzer will give alarms. At this moment, only hook lowering is allowed to prevent over-hoist action.

### Over-release Protection Device of the Main and Auxiliary Hook

- It is used to prevent the wire rope over-release. When the wire rope is released to the last three wraps, the limit switch will start working, and the releasing of rope will be automatically stopped by the control system. Meanwhile, the display and the buzzer will give alarms. At this moment, only rope retraction is allowed to prevent over release action.

### Assembly/Work Mode Switchover

- In Assembly Mode, some of the safety devices cannot function properly, such as jib limit, boom angle limit in LML, and overload, so as to facilitate the crane assembly;
- In Work Mode, all safety devices can function properly.

### Boom Angle Limit

- When boom angle exceeding 85° and jib angle exceeding 75°, corresponding limit switch will be triggered, and the control system will automatically cut off the boom hoisting. Meanwhile, the display and the buzzer will give alarm. At this moment, boom/jib luffing winch won't hoist but it can still lower down;
- When the boom angle is less than 30° and jib angle less than 15°, the control system will automatically cut off the boom/jib from further lowering. Meanwhile, the display and the buzzer will give alarms. At this moment, boom/jib luffing winch won't be able to lower. This protection is automatically controlled by Load Moment Limiter.

### Back-stop Device

- The boom and the superlift mast are respectively equipped with a pair of back-stop cylinders. The high pressure of the cylinder shall be overcome when the boom tilts backwards, and high pressure oil will be supplemented automatically when the boom swings forwards to increase the tension and prevent the boom vibration and shaking back;
- The jib rear mast is equipped with a pair of back-stop cylinders, while the jib front mast is equipped with a pair of pneumatic cylinders to prevent the mast from the backward inclination and tension of the jib luffing wire rope.

### Brake of Hoisting Mechanism

- All hoisting brakes are spring loaded normally closed disc brakes, which are featured with large braking force, maintenance-free, safe and reliable use, and long service life.

### CCTV Monitoring System

- It can be used to monitor the winding conditions of wire ropes of each hoisting mechanism, the conditions of superlift weight, and conditions around the equipment.

## Safety Devices

### Fault Auto-Diagnosis System

- Faults can be conveniently eliminated based on the fault code.

### Black Box

- It is able to record the operation data and machine movement, and analyze the remaining running conditions and service life of machine based on the actual performance.

### Pharos

- It is mounted on the top of the boom/jib and alerts in air during night.

### Anemometer

- It is mounted on the top of the boom/jib to monitor the wind speed in real time and display relative data on the monitor.

### Electronic Level Indicator

- It displays the tilting angle of the crane on the monitor in real time and protects the safe operation of the crane.

### Lightning Protection Device

- It includes the lightning protection device and the surge protection device, which can effectively protect the electric system elements and workers from lightning.

### Hook Latch

- The lifting hook is installed with a baffle plate to prevent wire rope from falling off.

### Swing and Traveling Alarm

- During swing and traveling, the alarm horn will be blown per certain frequency to alert the personnel around the crane. The horn can be shut off through the display.

### Function Lock

- The operation will be locked by pulling up the function locking lever on the right side of the seat inside the driver's cab or when the operator left the seat, after which no operating handles will be working so that improper operation caused by the body collision when getting on and off the crane can be avoided.

### Regulation of Engine Power Ultimate Load and Stalling Protection

- The controller can monitor the engine power so as to prevent stalling.

### Engine Status Monitoring

- It can show the engine coolant temperature, fuel volume, total working hours, engine oil pressure, engine speed, battery and voltage.

### Remote Monitoring System

- It monitors and analyzes the operation data so as to realize remote diagnosis of faults and timely solution.

### Emergent Stop

- In a sudden loss of control, press the emergent stop, and brakes will be applied on all actions such as hoisting, luffing, swing and traveling and engine stop.

## Transport Dimensions

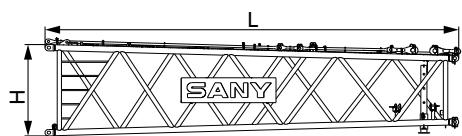

### 6m boom insert x2

|           |       |
|-----------|-------|
| Length(L) | 6.20m |
| Width(W)  | 3.00m |
| Height(H) | 2.77m |
| Weight    | 3.24t |

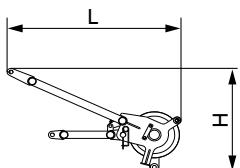

### 12m boom insert A x4

|           |        |
|-----------|--------|
| Length(L) | 12.24m |
| Width(W)  | 3.00m  |
| Height(H) | 2.80m  |
| Weight    | 5.75t  |

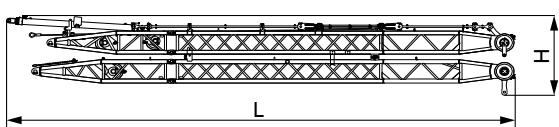

### Boom tapered insert x1

|           |        |
|-----------|--------|
| Length(L) | 10.70m |
| Width(W)  | 2.98m  |
| Height(H) | 2.74m  |
| Weight    | 6.03t  |

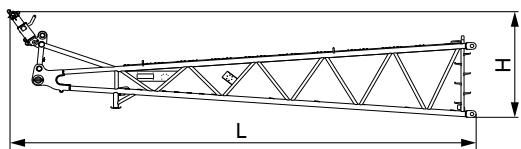

### Boom extension x1

|           |        |
|-----------|--------|
| Length(L) | 2.32m  |
| Width(W)  | 1.00m  |
| Height(H) | 0.818m |
| Weight    | 0.37t  |

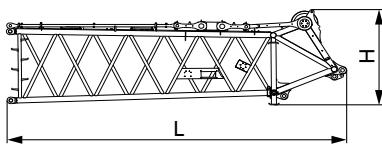

### Front and rear mast of luffing jib x1

|           |        |
|-----------|--------|
| Length(L) | 16.80m |
| Width(W)  | 3.10m  |
| Height(H) | 2.78m  |
| Weight    | 10.80t |

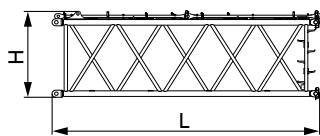

### Luffing jib base x1

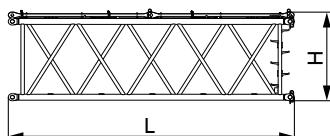

|            |        |
|------------|--------|
| Length (L) | 11.20m |
| Width (W)  | 2.62m  |
| Height (H) | 2.78m  |
| Weight     | 3.90t  |

**Transport Dimensions**

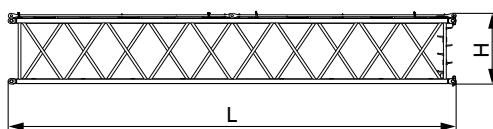

| <b>Luffing jib top</b> | <b>x1</b> |
|------------------------|-----------|
| Length(L)              | 8.13m     |
| Width(W)               | 2.54m     |
| Height(H)              | 2.48m     |

| Weight     | 2.90t |

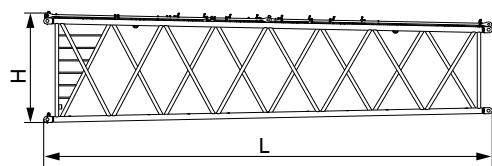

**Superlift mast top (with winch)** ×1

|           |        |
|-----------|--------|
| Length(L) | 12.40m |
| Width(W)  | 2.96m  |
| Height(H) | 2.40m  |
| Weight    | 9.24t  |

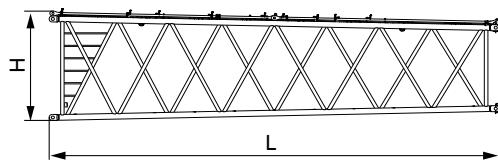

**Eagle tip** ×1

|           |        |
|-----------|--------|
| Length(L) | 11.70m |
| Width(W)  | 2.67m  |
| Height(H) | 2.92m  |
| Weight    | 7.26t  |

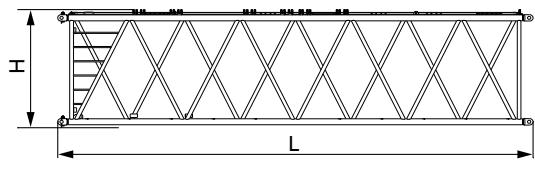

**12m power boom base** ×1

|           |        |
|-----------|--------|
| Length(L) | 12.20m |
| Width(W)  | 3.56m  |
| Height(H) | 3.25m  |
| Weight    | 6.98t  |

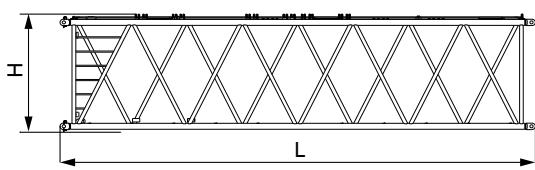

**12m power boom top** ×1

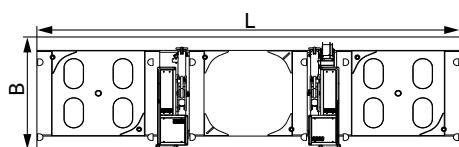

|            |        |
|------------|--------|
| Length (L) | 12.20m |
| Width (W)  | 3.56m  |
| Height (H) | 3.25m  |
| Weight     | 6.53t  |

**Transport Dimensions****12m power boom insert A** ×1

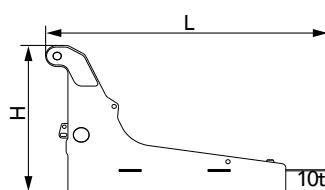

|           |        |
|-----------|--------|
| Length(L) | 12.20m |
| Width(W)  | 3.56m  |
| Height(H) | 3.25m  |
| Weight    | 6.36t  |

**12m power boom insert B** ×2

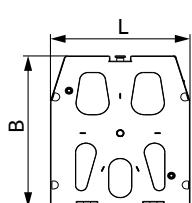

|           |        |
|-----------|--------|
| Length(L) | 12.20m |
| Width(W)  | 3.56m  |
| Height(H) | 3.25m  |
| Weight    | 6.73t  |

**Superlift counterweight tray** ×1

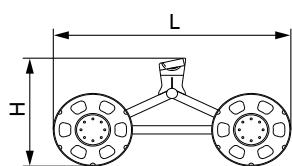

|           |       |
|-----------|-------|
| Length(L) | 8.60m |
| Width(W)  | 2.50m |
| Height(H) | 1.83m |
| Weight    | 30.0t |

**Rear counterweight tray** ×2

|           |       |
|-----------|-------|
| Length(L) | 3.18m |
| Width(W)  | 2.83m |
| Height(H) | 1.80m |
| Weight    | 10.0t |

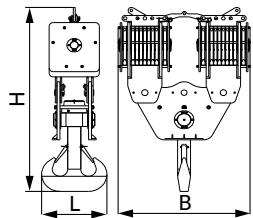

**10t counterweight block** ×36

|           |       |
|-----------|-------|
| Length(L) | 2.40m |
| Width(W)  | 2.85m |
| Height(H) | 0.48m |
| Weight    | 10.0t |

**Trolley** ×1

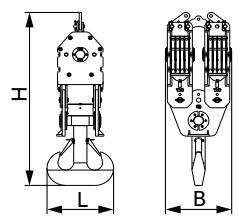

|           |       |
|-----------|-------|
| Length(L) | 3.00m |
| Width(W)  | 2.05m |
| Height(H) | 1.50m |
| Weight    | 1.09t |

## Transport Dimensions

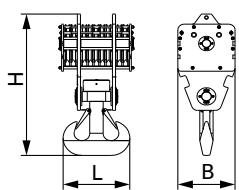

### 450t hook ×1

|           |        |
|-----------|--------|
| Length(L) | 1.33m  |
| Width(W)  | 2.69m  |
| Height(H) | 4.07m  |
| Weight    | 10.80t |

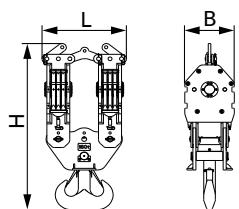

### 240t hook ×1

|           |       |
|-----------|-------|
| Length(L) | 1.18m |
| Width(W)  | 1.19m |
| Height(H) | 3.58m |
| Weight    | 4.71t |

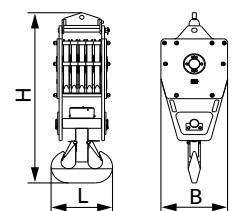

### 200t hook ×1

|           |       |
|-----------|-------|
| Length(L) | 0.75m |
| Width(W)  | 0.82m |
| Height(H) | 2.28m |
| Weight    | 3.81t |

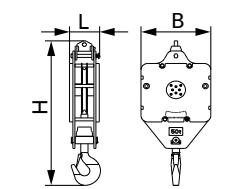

### 160t hook ×1

|           |       |
|-----------|-------|
| Length(L) | 1.38m |
| Width(W)  | 0.81m |
| Height(H) | 2.99m |
| Weight    | 3.81t |

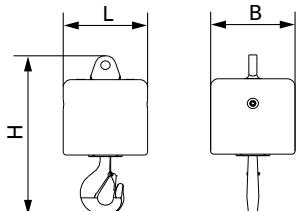

### 130t hook ×1

|           |       |
|-----------|-------|
| Length(L) | 0.75m |
| Width(W)  | 0.82m |
| Height(H) | 2.28m |
| Weight    | 3.06t |

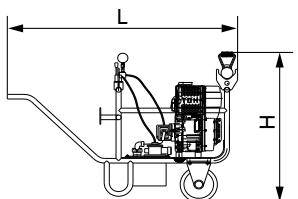

### 50t hook ×1

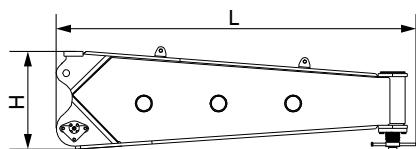

|           |       |
|-----------|-------|
| Length(L) | 0.45m |
| Width(W)  | 1.02m |
| Height(H) | 2.30m |
| Weight    | 2.52t |

**Transport Dimensions**

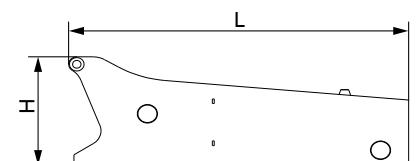

| <b>16t hook</b> | <b>x1</b> |
|-----------------|-----------|
| Length(L)       | 0.53m     |
| Width(W)        | 0.53m     |
| Height(H)       | 1.10m     |

| 90*             | -                    | 1        | 2           | 1                           | 1                          | 1          |
| 93*             | 1                    | 1        | 2           | 1                           | 1                          | 1          |
| 96*             | -                    | 2        | 2           | 1                           | 1                          | 1          |

Notes: Combinations marked "\*" mean the mid-point suspension cable is must, otherwise, the boom may break.

The use the mid-point suspension cable must be strictly in accordance to the instructions.

Attention: If the boom length is 78m or more, the crane must boom up from side by side erection outrigger or from the front by the special front erection outrigger, otherwise the crane may tip over.

| 96*            | 2           | 2            | 1            | -            | 2           |

Note: Combinations marked "\*" mean when boom length is 72m or more, the mid-point suspension cable is must, otherwise, the boom may break.

Attention: if the boom length is 84m or more, the crane must boom up from side by side erection outrigger, otherwise the crane may tip over.

## Working Radius in HJ
